PROFILE

Senior full-stack engineer with **8+ years** building and shipping mobile and web products for iOS, Android and the web with **React Native, React, TypeScript and Node.js**. Lead mobile engineer on a white-label corporate car-sharing platform since 2022; built AI vehicle-inspection tools and, on my own, a **2D/3D Yard Management platform**; delivered a complete school hall-pass and attendance system end to end as a freelancer. I own products from architecture to release — native upgrades, over-the-air delivery, payments, Bluetooth hardware and Arabic right-to-left interfaces for Gulf markets.

CORE SKILLS

Languages	TypeScript, JavaScript, Swift, Python, PHP, Java
Mobile	React Native (0.67 → 0.84), Expo / EAS, iOS, Android, Native Modules, BLE, VisionCamera, TensorFlow Lite, Firebase, CodePush
Web	React, Next.js, Vite, Material UI, Redux Toolkit, Redux-Saga, Context API, WordPress / PHP
2D / 3D	Konva, React-Konva, Three.js, React Three Fiber, SVG overlays
Backend	Node.js, Express, Django, FastAPI, REST APIs, microservices (Moleculer), Socket.IO
Databases	PostgreSQL, MongoDB, MySQL
DevOps & Release	Docker, Docker Compose, AWS (S3), Azure DevOps & Artifacts, Fastlane, EAS, App Store / Play Store
Payments	ClickPay, Razorpay, BharatPe, Etisalat
Also	White-label & multi-tenant apps, monorepos, Arabic RTL & i18n (5 languages), Vitest, Jest

EXPERIENCE

Senior Software Engineer

Oct 2022 – Present

RunCode Software Solutions · Hyderabad — mobility and fleet products for Middle East clients

CheckNShare – Corporate Car Sharing · React Native, TypeScript, Redux-Saga, BLE, TensorFlow Lite

- Lead mobile engineer since 2022 on a white-label React Native app shipped under two client brands, with a companion web admin portal.
- Built Bluetooth keyless access: device scanning, PIN pairing, lock/unlock commands tied to the active booking, an automatic lock and disconnect when a booking ends, and reconnection after an app restart or reinstall.
- Delivered booking (book now / advance, self-drive and chauffeur, credits, approvals, no-show rules), driver shifts, damage reporting on vehicle blueprints with photos, checklists, SOS and incident reports.
- Integrated on-device AI (TensorFlow Lite + VisionCamera) that guides users to each required photo angle; payments, Firebase notifications and five languages including Arabic RTL.
- Led three React Native major upgrades (now 0.84), Android 15 / 16 KB support and a self-hosted CodePush pipeline; own App Store and Play Store releases.
- Contributed to the Next.js admin portal (reports with Excel export, remote vehicle commands) and Node.js services (payments, notifications, permissions).

Yard Management Platform · React, TypeScript, Konva, Three.js / R3F, Redux Toolkit, Vitest

- Owned the architecture and development alone: 2D and 3D editors for open-area and multi-level yards — slots, zones, driveways, ramps, pillars, stairs and entry/exit points.
- Editing toolkit with move/rotate/resize, locking, levels, undo/redo, import/export (JSON, backend JSON, package, PNG) and live validation; direction-aware routing on drawn driveways with turn-by-turn instructions.
- Added Yard Operations, Project Management, Admin Controls and Global Visibility workspaces.
- Shipped as a typed, themeable npm package on Azure Artifacts, configured at runtime for standalone or embedded use; integrated into the Fleetable portal and a food-delivery client's portal, with automated tests for editor rules, routing and API contracts.

Verifai AI – Vehicle Inspection & Damage Detection · React, React Native, Node.js

- Built the inspection web app: assessments dashboard, panel and damage polygons drawn over photos as SVG, a damage table linked to the shapes, and model versions and confidence on every assessment.
- Built the annotation tool for training data (polygons with zoom and undo/redo, labelling, session restore) and the guided capture UI showing live model confidence — used across CheckNShare, Alfaris and a food-delivery fleet client.
- Built model-testing features in an Android app: download models from the server, cache them by hash and load them at runtime in the live camera.
- Extended the backend APIs for model upload, angle configuration, image submission and results in a Dockerised microservices stack.

Alfaris Rent-A-Car – App & Booking Website · React Native 0.84, Next.js, WordPress / PHP, ClickPay

- Rebuilt onboarding, OTP login and navigation with full Arabic RTL for a live rental app on the App Store and Google Play.
- Delivered monthly subscriptions (vehicle-year filter, tiered pricing, transfer fees, CDW+, add-ons, promo codes carried into contracts) and self-service payments (balances, dues, proforma invoices) through ClickPay — in the app and on the WordPress booking website.

- Led the upgrade to React Native 0.84 and set up CodePush over-the-air releases; also worked on the React/Next.js admin web app and AI inspection integration.

Fleetable – Fleet Operator App · *React Native, React*

- Built a separate mobile app for Alfaris fleet operators covering vehicle tracking and vehicle in/out management.

Food-Delivery Fleet Client (Gulf) – Web & Yard Management · *React, Next.js*

- Delivered web/admin features on the shared Fleetable codebase with client-specific configuration and database; integrated the Yard Management editor and AI-assisted inspection workflows.

Freelance Full-Stack Developer — CBS Student Pass & Attendance

Feb – Aug 2026

Expo / React Native, React + Vite, Node.js, Express, PostgreSQL, Socket.IO, Firebase, Docker, AWS S3

- Sole developer from requirements to production: teacher mobile app, teacher and admin web portals, REST API and deployment for a school.
- Hall passes with per-destination time and capacity limits enforced on the server; a pass-expiry scheduler with repeat reminders over Socket.IO and Firebase push.
- Daily attendance locked once submitted, monthly attendance calendar, CSV bulk upload and Excel/CSV reports; Docker deployment with S3 uploads and over-the-air app updates.

Software Developer

Jul 2021 – Oct 2022

Digicorp Information Systems · Ahmedabad

- **Sprint Money:** React Native investment app with a payment gateway, REST APIs, Firebase push notifications and production support.

Team Lead – Mobile & Web

Feb 2020 – Jun 2021

BrandIT Technologies · Visakhapatnam

- Led and mentored five developers. Owned **Tip My Ticket** end to end — React Native app, web app and Python/Django backend, payments and deployment — plus the customer website.

Mobile Application Developer

Jul 2019 – Jan 2020

RasilInfotech · Salem

- Jewellery POS/billing (Bluetooth printing, QR scanning, payments), chit-fund and restaurant apps.

iOS Developer

Jun 2018 – Jun 2019

Havik Healthcare · Hyderabad

- Healthcare iOS apps in Swift with in-app chat, push notifications and REST APIs.

EDUCATION

B.E., Computer Science & Engineering · Sathyabama University, Chennai · 2017
